ACCREDITED FUEL SOLUTIONS INC.

Fully Containerized Fuel Treatment & Forwarding System

AFS offers fully operational containerized fuel treatment and pump-forwarding systems. The containerized system is a completely engineered package with multi-stage filtration for particulate and water removal, requiring supply and discharge piping connections and electrical power.

AFS designs support global applications with component options suitable for 50 Hz and 60 Hz electrical supply. Wiring, controls, and pump motor starters are integrated into the container design.

Side access provisions accommodate maintenance. Final flow capacity, treatment performance, electrical requirements, controls, and site interfaces are confirmed for each project.
